

FETAKGOMO MAYOR URGES CITIZEN TO TEST FOR TUBERCULOSIS.

On World TB Day, 24th March the Mayor of Fetakgomo Cllr Sefala Kukie Raesetja Elizabeth is calling for new commitments and new action in the global fight against tuberculosis-one of the world's top infectious killer.

There has been tremendous progress in recent years and the world is on track to meet the Millennium Development Goal of reversing the spread of TB by 2015. But this is not enough. In 2013, 9 million people fell ill with TB and 1.5 million died. Clearly we all need to do more.

World Health Organisation commonly known as WHO has adopted a strategy envisions a world free of TB with zero deaths, disease and sufferings. It sets targets and outlines actions for governments and partners to provide patient-centred care, pursue policies and systems that enable prevention and care and drive research and innovations needed to end the epidemic and eliminate TB.

On World TB Day 2015 the Fetakgomo Mayor Cllr Sefala Kukie calls on all citizen, staff, affected communities, civil society organization and health care practitioners to join hands the drive to roll out this strategy and to reach, treat and cure all those who are ill today.

24 March 2015- the day to change gear and speed up global efforts to end TB altogether.

Together move Fetakgomo Forward
